Alexi Integrates with iManage to Enhance Legal Workflow

Alexi, a legal intelligence platform, has announced a new integration with iManage to streamline document access and AI-powered insights for law firms.

The integration allows law firms to connect Alexi’s AI-driven legal research tools directly with iManage. The iManage is a widely used knowledge management platform. Legal teams can securely search and use firm documents stored in iManage from within Alexi. They can also return generated outputs to the system without needing manual transfers.

The partnership aims to reduce workflow inefficiencies by eliminating the need to upload or duplicate files across platforms. It also supports compliance by maintaining firm-wide security and governance standards.

According to Alexi CEO Mark Doble, the integration helps firms move more efficiently from data to insights. The goal is to enhance client outcomes. Paul Bower, AI Director at iManage, said the collaboration supports the company’s open ecosystem strategy while upholding strong AI governance standards.

The integration reflects a broader industry shift toward embedding AI capabilities within existing legal infrastructure. The aim is to improve productivity and knowledge management.
