Alternative Energy Applications for Wind, Ocean, and Geothermal

The Advanced Technology Environmental and Energy Center has posted a free on-demand webinar discussing the importance of renewable energy sources, specifically wind, ocean and geothermal.

The webinar was a part of the Sustainable Energy Education and Training (SEET) project, a series of free webinars developed by SEET energy technology instructors.

Presenters discussed current and future energy challenges of using renewable sources of energy, including population growth, overconsumption, and problems with finite fossil fuel sources.

The discussion also covered the basics and outlook for the various types of renewables.

Watch the on-demand webinar.
