Biodiesel Technology: Enhancing Profit through New Processing Techniques

Biodiesel Magazine has posted online its recent webinar that discussed how a biodiesel operation could be saving money and increasing throughput.Methes Energies Canada Inc. sponsored the event.

On its website, *Biodiesel Magazine* says that the biodiesel technology landscape has evolved significantly over the past decade. Changing market dynamics, environmental and government incentives to use more waste, and industry maturation have all contributed to more efficient processing of low-cost materials.

During periods of policy uncertainty, however, the lowest-cost producers employing innovation and new processing techniques stand a better chance of surviving—and profiting—through tough times.

This webinar hears from innovators in the technology space on how your biodiesel operation could be saving money and increasing throughput.

Watch the on-demand webinar.
