

Brightflag Introduces Microsoft Outlook Integration For Matter Management

Brightflag, the AI-powered legal spend management and matter management software, today announced the launch of its Microsoft Outlook integration, limiting the need to transition between tools and keeping essential context within easy reach. This latest product development will be followed by several releases throughout 2021 focused on applying Brightflag's machine learning leadership and modern design principles to more elements of the platform.

With the new integration, Outlook users can now sync emails, attachments, and notes directly into a legal matter managed in Brightflag without leaving their inbox. Once in Brightflag, they can also search through this information by keyword without switching back to Outlook.

Security and compliance remained top priorities for Brightflag while developing this convenient new solution. Outlook assets uploaded to Brightflag are protected with SOC 2 Type II and ISO 27001:2013 compliant controls that safeguard the entire platform. Centralizing all relevant matter materials also helps customers preserve clear and simple audit trails.

The Microsoft Outlook integration is available to all Brightflag customers at no extra charge and can be configured in less than an hour.
