

Brightflag Strengthens Security Controls as Legal Departments Accelerate Digital Transformation

Brightflag, the AI-powered legal spend management and matter management platform, today announced its achievement of SOC 2 (Type II) and SOC 1 (Type II) certifications without exceptions. Following the recent renewal of the company's existing ISO 27001:2013 certification, these attainments underscore Brightflag's reputation as a trusted partner to corporate legal, compliance, and security professionals eager to embrace cloud-based solutions.

While navigating an unexpected shift toward remote work in 2020, many global enterprises began to fully recognize the risks associated with tying essential business applications to a single physical workplace. Through third-party verification of its security controls, and the expertise of its own world-class customer success team, Brightflag is helping corporate legal departments rapidly execute ambitious digital transformation plans.

SOC 2 (Type II) evaluates general information security practices, highlighting Brightflag's strength in safeguarding customer data. SOC 1 (Type II) more specifically attests to Brightflag's protection of invoice approval, accruals management, and financial reporting processes.
