

Building a Strong Information Governance and eDiscovery Framework

- ✖ An on-demand webinar discusses the increasing challenges for agencies to handle data management.

DLT Solutions and Symantec host the webinar titled “Building a Strong Information Governance and eDiscovery Framework.”

Recent budget cuts have increased challenges for agencies to manage data management, said a DLT Solutions spokesman. While many organizations have focused on the increasing cost of data storage, perhaps more significant are the costs and risks of managing the data. This includes identifying, preserving, processing, analyzing, and producing data for internal investigations, FOIA requests, and legal eDiscovery needs.

This on-demand webinar focuses on the public sector benefits of building a solid information governance foundation within agencies. A proper foundation will not only help manage the lifecycle and growth of data, it also plays a critical role with agency eDiscovery, Records Management, Freedom of Information Act, Internal investigators, and Information Technology stakeholders.

- Principals from the Sedona Conference’s latest commentary on Information Governance
- The importance of building a proper information governance framework and how it impacts individual data stakeholders
- How the Presidential Records Management Directive 2016 Goal for managing all e-mail records electronically is affected by information management processes and policies
- How to leverage Symantec’s suite of information

management, backup and recovery, and eDiscovery solutions to build a solid information governance foundation and meet the 2016 electronic email records management goal
