Cost Effective Energy Improvements for Small and Medium Industrial Facilities

Could you confidently walk through a small to medium sized industrial facility and identify the various opportunities to reduce energy use and costs?

The Energy Center of Wisconsin has made available a free on-demand webinar on controlling costs in industrial facilities.

The webinar discusses what to look for when assessing these types of facilities. It shares information about the most common energy improvements and cost effective strategies.

A variety of systems and process controls, including motors, compressed air combustion systems and lighting are explored, the Center says on its website. The webinar reviews technology characteristics, key areas for consideration, assessment checklists and data collection approaches for future analysis.

Watch the on-demand webinar.
