Using eDiscovery Tools to Build Your Case

Daegis Inc. presents a complimentary on-demand webinar discussing how technology can help attorneys do much more than just review and produce documents.

Technology helps attorneys understand their case, test theories and develop litigation strategies — as soon as data is collected, **Daegis** says on its website. By utilizing technology to its best advantage, attorneys zero in on the information they need early on, even before a review has begun

Using an eDiscovery "toolkit" enables attorneys to:

- Assess the strengths and weaknesses of a case early on
- Determine if a complaint is an isolated incident or part of a pattern or practice
- Evaluate the likelihood that a putative class action meets the requirements for class certification
- Identify potential key witnesses
- Test litigation theories by searching the data, independent of the review
- Prepare for Rule 26 conferences
- Develop proportionality and cost shifting arguments for discovery motions, and
- Monitor the review to ensure that reviewers understand the case and to identify the need for clarification or retraining quickly
