

Effective Compliance Oversight of Energy Commodity Trading in a Remote Trading Environment

“Following the declaration of a global pandemic due to the widespread transmission of the coronavirus (COVID-19), the issuance of shutdown and/or stay-at-home directives cascaded from commercial enterprises and state and local governments across the United States,” write Levi McAllister, Michael M. Philipp and Katherine Dobson Buckley in Morgan Lewis’ *Power & Pipes* blog.

“During this period of extreme disruption to daily routine, the continuity and integrity of energy operations were necessary to ensure that the massive shift to home-based life could exist with minimal business disruption. Front- and back-office personnel engaged in trading energy commodities quickly transitioned to a work-from-home (WFH) posture, ensuring that their firms could preserve market access for production or output while also consummating the transactions needed to procure an adequate fuel source, managing price exposure to highly volatile commodity prices, or executing preexisting trading strategies.”
