Energy Storage on the Grid

A free on-demand webinar sponsored by NEC Energy Solutions discusses various applications for energy storage on the grid and how they can be used to help grid operators, generators, or utility companies meet the challenges of ensuring reliability and increasing the efficiency of existing resources or infrastructure.

Actual real world case studies describe how these grid storage solutions were configured from standard modular building blocks and deployed to solve challenges for their owners. The webinar covers the application modelling and configuration process, the installation and commissioning, as well as actual results from select cases.

NEC presenters are Roger Lin, Director, Product Marketing, and Rhys Foster, Senior Sales Engineer.
