

Environmental Rules Update for Power Plant Personnel

✖ POWER magazine presents a complimentary on-demand webinar on environmental regulatory issues confronting the utility industry as the Environmental Protection Agency continues to ratchet down emission rates and discharge limits through rules involving air, water, and waste regulations.

On its website, POWER says this annual roundtable discussion by the industry's leading authorities on environmental regulation will offer insight into the likely outcome of the greenhouse gas rulemaking process for existing plants; the likely regulatory timeframes and legal issues related to upcoming water, waste, and air rules; and the range of response strategies being implemented by the utility industry for surviving in the current regulatory environment.

Webinar attendees will learn the latest on water, air and carbon emission regulations from the U.S. Environmental Protection Agency. This discussion at ELECTRIC POWER 2014 offered an update on the EPA's expected carbon emission rules for existing power plants, rules related to Section 316(b) of the Clean Water Act, as well as ongoing compliance with a host of air emission rules, POWER says.
