Webcast: Authenticating E-Signature Transactions

eSignLive by Vasco will present a **complimentary webinar** on the role authentication plays in digital transactions on Thursday, June 23, at 2 p.m. Eastern time.

Remote e-signature transactions are becoming the norm as mobile customers continue to demand service on their terms – anytime, anywhere, eSignLive says on its website. But how do you know exactly who you are transacting with? Authentication.

Authentication associates an e-signature to the person signing and ensures enforceability – so choosing the right user authentication method is important, the company says.

The session will include

- Authentication best practice and must-know tips
- Selecting the right authentication method
- Making it easy for customers
- 3rd party ID verification
- Mitigating risk

Register for the webinar.
