Taking Control of Cybersecurity: A Practical Guide for Officers and Directors

Foley & Lardner partners Chanley T. Howell, Michael R. Overly, and James R. Kalyvas have published a comprehensive white paper titled: Taking Control of Cybersecurity – A Practical Guide for Officers and Directors.

The white paper describes practical steps that officers and directors *should ensure are in place or will be in place in their organizations* to prevent or respond to data security attacks, and to mitigate the resulting legal and reputational risks from a cyber-attack, the firm says on its website. The authors provide a blueprint for managing information security and complying with the evolving standard of care. Checklists for each key element of cybersecurity compliance and a successful risk management program are included.
