

CobbleStone Software Announces Contract Data Discovery and Extraction Services

CobbleStone Software, developer of contract lifecycle management solutions, announced the release of Contract Data Discovery and Extraction Services.

The company said this service solves one of the most volatile pain points in the contract migration process through proprietary AI-powered data extraction.

“Previously, when organizations had a difficult time locating specific information in a sea of contracts, they had nowhere to turn for help. To complicate the contract lifecycle further, curating contract data proved to be a time-consuming and tedious endeavor,” the company said in a release.

CobbleStone’s Contract Data Discovery and Extraction Services gives contract professionals a way to enter all necessary data and key terms into one centralized system, the company said.

“At CobbleStone, we recognized a need that many users and potential users shared. They have mass amounts of data that isn’t organized and makes it harder to migrate to CobbleStone’s platform. What was once a daunting task typically handed off to lower-level employees, can now be accomplished in as little as 20 minutes. With our intelligent data extraction services, you can source the work to us and we take care of the rest,” said Mark Nastasi, Vice President. “Our 20+ years of contract management software experience allowed us to develop a 3-step process that blends machine-learning with ‘human-like’ evaluation.”

CobbleStone Software is committed to evolve and develop products and services that most effectively and efficiently benefit current and future clients.
