Contract Law in the Age of IoT

Technology is revolutionizing nearly every aspect of contracts, from how they are generated to how they are terminated. In some cases, contract tech is beneficial – but in other cases, as with the Internet of Things (IoT), tech is making contracts more and more difficult to analyze, according to **IoT Business News**.

“Many experts believe that contract law isn’t prepared for the IoT revolution, which is dangerous considering the abundance of IoT devices already in operation,” the article says. “Businesses and consumers alike should be aware of concerns regarding contracts and the IoT, so everyone can stay protected in the years to come.”

The article defines a contract in the age of IoT and discusses how the IoT has changed contracts.
