A Legal Guide to Power Generation Mergers and Acquisitions

POWER magazine has posted the first of a **two-part series** examining what dealmakers need to know before making any power industry mergers and acquisitions.

The authors, Jeff M. Dobbs and Robert S. Goldberg, are partners with Mayer Brown LLP in the firm's Houston office.

The series is designed to describe the legal due diligence process, the types of agreements, and issues that are frequently encountered in the diligence review of operating electric power generation assets. It also will outline the structure of a typical acquisition agreement for these assets, and highlight typical provisions and issues that are heavily negotiated between buyers and sellers.
