

Global LNG: Adjusting to New Realities

Oil & Gas Journal presents a free on-demand webcast looking at how global LNG trade will be affected over the next 12-24 months by falling crude oil prices and changing patterns and pressures of demand.

The Journal says the webinar discusses: Will US LNG production play a role in balancing markets? Or will it add to a growing global oversupply of LNG for markets remote from easier natural gas supply? Will new buyers with marginal credit, smaller requirements, or great need for flexibility begin to look attractive to suppliers? How will high-cost, mega-projects in Australia respond to new construction cost trends?

Presenters are James T. Jensen President of Jensen Associates, and James F. Bowe, Jr., Partner in King & Spalding's Global Energy Practice.

Watch the on-demand webinar.
