

How Drones Are Changing the Energy Industry

The National Law Review has posted a paper on the use of drones in the energy industry and the FAA's upcoming proposed regulations governing unmanned aircraft systems' usage.

Bracewell & Giuliani associates Michael Weller, Salo Zelermyer and Joshua C. Zive wrote the report.

"The expansion of the UAS market is inevitable, and the use of this technology by the energy industry will only increase," the authors write. "That being said, there are challenges ahead. The current approval process will soon give way to a new regulatory program."
