

How Will Machine Learning and NLP Disrupt Contract Management?

ContractRoom has posted a free eBook on **Building a Transformative Contract Management Practice** that can be downloaded.

Machine learning is a field of computer science that allows computers to recognize patterns and learn from them, the company says on its website. With machine learning algorithms are used to learn from and make predictions on data. Arthur Samuel, a pioneer of the tech industry with a background in electrical engineering, was the first one to label this field of computer science as machine learning and defined it as “Field of study that gives computers the ability to learn without being explicitly programmed” in 1959.

The book discusses how machine learning and Natural Language Processing could be applied to B2B contracting in the future.
