Icertis and Dioptra Team Up to Speed AI Contract Review

BELLEVUE, Wash. & NEW YORK – Icertis and Dioptra have team up to speed contract review faster and more accurate using AI. The two companies are combining their technologies to help legal teams handle contracts more efficiently and reduce risk.

The partnership brings together Icertis' AI tools, explicitly built for contracts, with Dioptra's redlining software. This combo helps legal teams automatically review and edit contracts in line with company policies known as "playbooks" saving time on routine work while flagging risks in more complex deals.

As demand for legal services grows and corporate risk rises, legal departments are looking for smarter ways to manage contracts. With this new toolset, legal teams can focus more on essential negotiations and spend less time on repetitive tasks.

"Legal teams need to do more with less, and AI can help," said Sudarshan Chitre, Senior VP of AI at Icertis. "Our partnership with Dioptra lets us offer powerful AI tools that improve contract accuracy and speed."

Farah Gasmi, co-founder of Dioptra, said the partnership allows companies to move faster without changing their existing processes. "Our AI builds on what teams already use, making contracts quicker and safer to review," she said.

Icertis is known for its AI-powered platform that helps businesses maximize the value of their contracts. At the same time, law firms and in-house legal teams use Dioptra to automate early-stage contract reviews.
