

Collapsing Oil Prices: Strategies and Opportunities

A white paper published by ICF International examines how different oil price scenarios will have varied implications, strategies, and opportunities for producers, midstream developers, and investors. Key discussion topics include oil and gas prices and strategic implications and opportunities for the oil, natural gas, and NGL sectors.

ICF manager Dr. Ananth Chikkatur wrote the paper.

“Recent declines in oil prices have halted several production and midstream investments and have increased the risks for new projects, ICF says on its website. “However, opportunities always exist for those with an eye to the longer term. Reduced oil prices can help increase efficiency and ‘cut the fat’ across the industry. Savvy companies are focused on identifying new opportunities and making the most out of the assets they own.”
