iCONECT and Nuix Deliver Direct-to-Database Integration

iCONECT Development, LLC, a technology leader that develops intuitive, web-based eDiscovery software and Nuix, a technology company that enables people to make fact-based decisions from unstructured data, announce they have competed delivery of “Direct to Database” (D2D) integration between Nuix eDiscovery and iCONECT-XERA.

From within the Nuix eDiscovery Workbench, Nuix users can now automatically create an iCONECT-XERA database and transfer extracted document data for review.

The near-complete elimination of manual inputs enables a much faster data migration process than was previously possible, iCONNECT says on its website.

“Our testing shows a 60% reduction in the amount of administrator time spent compared to the traditional import-export process,” says Iram Arras, iCONECT’s Vice President, Product Strategy. “The automated database configuration process also reduces errors and time spent correcting mistakes.”
