

Increasing Renewable Energy with Hydrogen Storage and Fuel Cell Technologies

✖ The U.S. Energy Department offers a free on-demand webinar titled “Increasing Renewable Energy with Hydrogen Storage and Fuel Cell Technologies.”

The webinar features representatives from the National Renewable Energy Laboratory and focuses on how to integrate hydrogen and fuel cell technologies into the transportation, industrial and other sectors.

Learn about the unique ways hydrogen storage systems can support the electrical grid and complement renewable generation. This talk also looks at the architecture of hydrogen storage systems and examine the economic competitiveness of those systems when compared with conventional systems.
