

IPsoft Brings Automation to Legal Documents with ContractPodAi's Artificial Intelligence Contract Management Solution

ContractPodAi®, the award-winning provider of AI-powered contract lifecycle management software, today announced that IPsoft, the largest independent leader in enterprise AI, has rolled out ContractPodAi to support its document management. Live since October 2019, IPsoft is working with ContractPodAi to empower its global workforce with an innovative contract management solution.

As a fast-moving and highly innovative company, IPsoft looked to migrate from document management to a records-based approach for contract management. To do so, the company required a contract lifecycle management system that is reliable, robust and graphically intuitive, as well as a solution that could easily analyze and track contract data. What's more, the solution needed to be simple to use for attorneys and legal staff in order to alleviate the workload on legal teams and drive company-wide adoption.

ContractPodAi offers customers intelligent AI functionality, out-of-the box. Customers gain access to a smart contract repository, which replaces time-consuming manual efforts and helps to manage versions of contracts across locations. Additionally, ContractPodAi helps customers track key metrics regarding contract data and search metadata including phrases or clauses. What's more, having a dedicated success manager provides IPsoft a go-to contact who's knowledgeable about the product, as well as able to quickly resolve any potential

issues.
