

Is the AI Revolution Creating Information Governance Problems?

“The world is powered by data and technology. With all the focus and new legislation on data privacy, organizations need to keep governance at the forefront when reconciling the use of emerging technologies with compliance and privacy considerations. One area where this becomes particularly important is when organizations utilize platforms, solutions, and other technologies powered by artificial intelligence (AI) for business purposes. Some examples include creditors automating decisions on consumer approvals or employers using AI technology to assist with hiring determinations. The question becomes what framework should be placed around these processes and how can organizations implement some level of governance to avoid violations under laws like the EU’s General Data Protection Regulation (GDPR) or overall data mismanagement that can result in a myriad of other issues?, posts in *Epiq in their blog*.
