Legal Lessons Learned in Shale Plays in North America

Norton Rose Fulbright presents a complimentary on-demand webinar on the key issues facing energy companies worldwide as they pursue new opportunities in the unconventional hydrocarbon sector.

On its website, the firm says that in the last ten years, technical advances in hydraulic fracturing have made vast reserves of shale gas and oil technically and economically recoverable in North America.

Currently, the United States and Canada account for virtually all of the global shale related production. As shale oil and gas production increases globally, North America's experience in the exploration and production of unconventional resources can serve as a valuable blueprint for countries in the initial stages of this development.

Watch the on-demand webinar.
