

Managing Risk During PV Plant Development

☒ *Solar Power World* will present a complimentary webinar on assessing risks and uncertainties throughout the development of photovoltaic plants. The webinar will be Thursday, Sept. 4, beginning at 2 p.m. Eastern time.

Safety, performance, availability and achieving expected energy yields are critical factors from early planning and design, to commissioning, to the in-service lifetime of a PV plant, *Solar Power World* says on its website. UL, the sponsor, will examine issues that investors, developers and operators address when assessing risks and uncertainties throughout the PV plant development.

This webinar will discuss potential risks and mitigation strategies.

Attend this webinar to learn:

- What the potential risks are during PV Plant developments
- Ways to manage and mitigate risk in PV Plant developments

Register for the webinar.
