Managing the Condition and Energy Efficiency of Plant Assets

Oil and Gas IQ has posted a complimentary on-demand webinar designed to serve as a primer on energy inefficiencies, as well as opportunities to improve operational efficiency.

On its website, Oil and Gas IQ says that, as the industry moves into deeper and more costly arenas to produce hydrocarbons, energy demand will grow even further.

This webinar introduces the challenges of reliability programs that are now standard practice in companies reliant on machines, equipment, and other physical assets.

The presenter is Shane Golaup, a Business Solutions Consultant for Infor specializing in Enterprise Asset Management.

Watch the on-demand webinar.
