Natural Gas Processing and Effects on Royalty Income Streams

Penn State Extension has posted an on-demand webinar on how processing of natural gas affects income streams to mineral rights owners, particularly in the Marcellus Shale area.

The discussion covers wet gas and dry gas production, condensate, natural gas processing plants, natural gas liquids (NQLs), petrochemical integration, the absorption process and related technology.

The presentation is a part of the Penn State University Cooperative Extension Shale Webinar Series.

The speaker is Steven M. Karabin, PNGE, RL, President and CEO, The Rhino Group. Matt Henderson is the moderator.

Watch the recorded webinar and see the **presentation slides**.
