Newly-Proposed Carbon Pollution Limits for Existing Power Plants

The Southern Alliance for Clean Energy (SACE) has posted an on-demand webinar on the newly-proposed carbon pollution limits for existing power plants.

Webinars in this series are an opportunity to learn about emerging environmental regulations, clean energy technologies, opportunities and issues that SACE engages in everyday, the Alliance says on its website.

On June 2 the Environmental Protection Agency released proposed standards for the first-ever limits on carbon pollution from existing power plants. These carbon pollution standards, under section 111(d) of the Clean Air Act, will be designed to significantly reduce harmful carbon dioxide emissions from the electricity sector.

This webinar provides an introduction to the proposed 111(d) regulations, explain what this means for utilities and regulators in the Southeast, and how you and your organization can be involved in this rule-making process.

Watch the on-demand webinar.
