Nov. 19 Webinar: Intelligent Energy Systems

JLL and Environmental Leader will present a complimentary webinar on the use of intelligent energy systems in commercial buildings.

The hour-long webinar will be Wednesday, Nov. 19, at 2 p.m. Eastern time.

On the invitation, the sponsors say that one of the most significant trends in commercial building management today is the use of technology to continually monitor and adjust building systems to optimize performance.

“The benefits of intelligent energy systems are numerous – energy savings, access to real time data to optimize building performance, cost savings, reduced emissions and occupant comfort,” the sponsors say. “This webinar will discuss advances in M2M technology and how it is being deployed today in buildings and beyond – helping to create smart cities. It will also focus on lighting and how today’s advancements in lighting controls form an important component of a building’s intelligent energy system.”

Register for the webinar.
