White Paper: Electronic Signature Security & Trust

eSignLive by Vasco has published a white paper discussing the importance of making sure electronic signature providers meet the highest security standards. The paper **can be downloaded** from eSignLive's website.

Security is at the core of a trusted digital experience between a company, its employees and customers, says eSignLive.

That means more than simply passing an audit. eSignLive recommends taking a broader view of e-signature security that also addresses:

- Choosing the appropriate level of authentication
- Protecting signatures and documents from tampering
- Making it easy to verify e-signed records
- Ensuring vendor-independent records
- Verifying the vendor has a consistent track record of protecting customer data
- Creating end-to-end trust through white-labeling and integration with your existing IAM framework
