Download: 5 Future Tech Forces & Board Expectations

A new publication by the National Association of Corporate Directors examines the areas of technology that are "fundamentally changing the economic world."

The article can be **downloaded** from the NACD's website at no charge.

The areas discussed in the article include artificial intelligence, blockchain, cybersecurity, hyperconnectivity, and symbiotic systems.

J.T. Kostman, the author of the article and managing director of Applied Artificial Intelligence at Grant Thornton, provides real-world examples that illustrate the capabilities these technologies have enabled, the risks they pose, and why they are considered to be the driving forces of "the fourth industrial revolution."
