

# White Paper: User Authentication for E-Signature Transactions

OneSpan has published a white paper titled “User Authentication for E-Signature Transactions” and made it available for downloading at no charge. (*See the download form below.*)

The white paper provides guidance on how to select and implement user authentication techniques. It answers questions like:

- How do I select the right authentication for my requirements?
- How do I implement strong authentication, without making the process difficult for the customer?
- Can I leverage existing user authentication credentials?
- Can I adjust my user authentication criteria for different transactions and processes?
