Remaking the Utility Business Model

ABB presents a free on-demand webinar on the possiblity for a new utility business model in the regulated utility business.

The traditional regulated utility business model is under siege. Demand growth is on the decline at the same time costs, customer expectations and regulatory scrutiny are increasing. Reliability has always been the prime directive of the power industry.

Now a confluence of changes in technology, regulation and public policy have produced a mortal threat to the traditional cost-of-service model that has sustained the industry for more than a century.

The webinar features Stephen Whitley, President & Chief Executive Officer of the New York ISO.
