

Renewable Energy and Energy Efficiency in an ESCO Contract

☒ Security & Sustainability Forum will present a webinar on the use of energy service company contracts. The one-hour event will be Thursday, July 24, at 1:15 p.m.

The value of energy services company (ESCO) contracts has been well documented after 30+ years of deployments. Until recently, renewable energy has been too expensive with long paybacks which did not line up with traditional energy conservation measures. However, the recent reduction in cost combined with technological performance advancements makes renewable energy, such as solar PV, desirable in ESCO contracts.

In this webinar, a panel comprised of industry, finance and government leaders, will break down an actual case study and provide insight on the advantages and pitfalls.

Register for the webinar.
