Data Privacy and Security Issues in Cloud Contracts: Free Dallas CLE Luncheon

CLE Luncheon, Sept. 26, 12 p.m. CDT
Belo Mansion, Dallas

Scott & Scott, LLP will present a complimentary CLE luncheon titled "**Data Privacy and Security Issues in Cloud Contracts**" at the Belo Mansion in Dallas on Monday, Sept. 26, from noon to 1 p.m. CDT. The event will be hosted by the Computer Law Section of the Dallas Bar Association.

Robert J. Scott, managing partner of **Scott & Scott**, will share suggestions on how each party can mitigate, balance or transfer the privacy and security risks in cloud computing.

On the surface, cloud agreements are similar to traditional technology licensing and services agreements; however, cloud computing engagements expose both the client and the service provider to risks not present in more traditional technology service or software transactions, Scott says. The transformation from on-premises software deployments to cloud based models has widespread implication for data privacy, security, and regulatory compliance.

Scott will address each element that contributes to privacy and security risk in cloud computing, including:
• GLBA Rules Affecting Cloud Contracts
• Using Cloud Services in Healthcare
• Due Diligence Obligations in Selecting Cloud Vendors
• Negotiating Key Provisions including insurance, indemnity, and limitations of liability
• How to Comply with Oversight Regulations involving Cloud Service Providers

Attendance for registrants is free, and lunch will be provided.

Register for the CLE luncheon.
