

The Missing Puzzle Piece for Getting to 100% Clean Power

“Across the country, dozens of cities and states have passed laws or resolutions targeting 100 percent carbon-free electricity – most recently 20 communities in Utah and the state of Virginia,” reports David Roberts in Vox’s *Energy & Environment*.

“But is it even possible to power a modern economy with a carbon-free grid? And if so, what are the best energy sources and technologies for getting there?”

“Now there is a growing list of jurisdictions that face stringent emissions targets in years ahead and urgently need to figure out answers. We’ll discuss the most notable such jurisdiction, California, and a cool new(ish) technology that it may help it reach its 100 percent target, in a moment.”
