Tracking Renewable Energy for the U.S. EPA’s Clean Power Plan

The Center for Resource Solutions has posted a complimentary on-demand webinar outlining guidelines for states to use existing renewable energy certificate (REC) tracking systems as an integral part of state compliance for the EPA’s Clean Power Plan.

The webinar is titled “Tracking Renewable Energy for the U.S. EPA’s Clean Power Plan: Guidelines for States to Use Existing REC Tracking Systems to Comply with 111(d).”

These REC tracking systems, together with state policies designed to increase the production and use of renewable electricity, will be critical to states looking to use renewable energy like wind and solar to reduce the carbon intensity of their power sector, CRS says on its website.
