Defensibility: The Dirty Little Secrets of eDiscovery

Venio Systems offers a complimentary white paper on defensibility problems due to spoliation of data between collection and review.

“Anyone who has spent time working with a service provider or law firm eDiscovery processing department knows that eDiscovery processing isn’t simple,” Venio says in a release. “However, defensibility problems due to spoliation of data between collection and review don’t get the same press or case law “bench slaps” that typically result from failures in preservation.”

In the paper, Venio’s Vice President of Training and Education, Babs Deacon, discusses the five “dirty little secrets” of eDiscovery:

1. Processing Extraction Levels
2. Multiple Processing Applications
3. Technology Selection
4. Human Participation
5. Keyword Searching

Download the white paper.
