

We Can't Drill Our Way to Energy Security

"Thanks to a remarkable oil and gas boom, the United States has achieved the long-sought goal of energy self-sufficiency: We now produce more oil and refined products, natural gas and coal than we consume. In particular, horizontal drilling and hydraulic transformed the United States from," reports Jesse Jenkins in The New York Times.

"This kind of physical energy security is a blessing when conflict disrupts the global energy trade. Europe's frantic dash to free itself of Russian energy illustrates how deeply problematic it can be to not have it. Yet look at prices at the pump, and you'll see why we can't drill our way to true energy security. That's why the Senate must finalize."
