Webinar: Innovation on Water and Energy Issues

The Center for Climate and Energy Solutions plans a webinar titled “Innovation and effective stakeholder engagement on water and energy issues.”

The event will be Thursday, July 24, at 2 p.m. Eastern time.

Involving other stakeholders or partners for a water-energy project often leads to insights, innovations, and/or greater efficiency. In this third and final webinar, speakers from American Water and East Bay Municipal Utility District (EBMUD; California) discuss how they leveraged stakeholder involvement to address water-energy challenges and implement new innovations.

Suzanne Chiavari, Engineering Practice Leader from American Water, will describe some of her organization’s recent work in utilizing renewable energy technologies, and how they’ve engaged community partners to establish greater integration across their resource management activities. Clifford Chan, Manager of Water Treatment and Distribution at EBMUD, will talk about two projects with multiple stakeholders that have helped the utility to implement its energy management strategy.

Register for the webinar.
