

Wind Project Site Evaluations

✖ Windpower Engineering & Developer will present a webinar Tuesday, August 26, at 2 p.m. EDT on wind project site evaluations and their impacts on development and longer-term asset management.

Site evaluations at potential wind farm sites are essential for good estimates of annual wind speeds there, the magazine says on its website. Preliminary wind data increases the profitability and reliability of the wind farm because it allows selecting a turbine technology that is best suited. Selecting these then allows finding a best layout. Ultimately, accuracy of the site evaluation can simplify asset management concerns.

The webinar will cover:

- Types of evaluations
- What qualifies as bankable data
- The long-term significance of site evaluations

Register for the webinar.
