

Avoiding an E-Discovery Crisis Created By a Preservation Lapse – Zapproved White Paper

Zapproved is offering a complimentary recap called “State of Preservation Today” from The Proceedings from the 2015 Conference on Preservation Excellence. Michael Arkfeld moderated the discussion, which included panelists Hon. Xavier Rodriguez, Ariana Tadler and Robert Owen.

Three trends shaping the e-discovery world today, the panel discussed, are big data, the cloud, and mobile.

These trends mean organizations are at greater risk than ever from an e-discovery crisis created by a preservation lapse. Teams need to be in rapid-response, even first responder mode to effectively serve the enterprise. By describing the state of the industry, panelists and audience members set the tone for the rest of the conference, approved said.
