Zapproved E-Discovery Processing Speed Exceeds 1TB/hour Using True Cloud Computing

Zapproved Inc. announced demonstration of what it calls “a major technological advancement in electronic discovery by processing data at a rate exceeding one terabyte per hour” using Digital Discovery Pro.

The company says Digital Discovery Pro is a software application that taps the power of Amazon Web Services (AWS) Cloud computing for corporate legal teams so they can process and review discovery data instantly for immediate insights to a case or internal investigation.

“Breaking the terabyte-per-hour processing barrier marks a new era for electronic discovery. Digital Discovery Pro was designed as modern software and with future customer needs in mind. We developed it to take full advantage of the AWS Cloud and have optimized it for scalability and affordability. Our software applies the amount of computing power required to accomplish any task quickly,” said Monica Enand, CEO and Founder of Zapproved. “The technology we’re providing gives in-house legal teams unprecedented control, access, and affordability over discovery.”

The company’s release continues:

> The Z-Discovery Platform, and Digital Discovery Pro, in particular, is creating a more sustainable model for electronic discovery in the face of exponential data growth in corporate America. The system can adapt quickly to meet the demands of greater volumes of electronically stored information (ESI) without compromising performance or

defensibility.

Digital Discovery Pro is the processing and instant access review application that is extremely easy to use regardless of the user's experience with technology, with features like, drag and drop to upload data, and immediate processing that allows instant review and tagging. It is part of the Z-Discovery suite which includes: Zapproved's flagship Legal Hold Pro™ product, the award winning e-discovery software used by corporate legal departments, and Data Collect Pro™ which is a cost-effective and user-friendly application for conducting targeted collections remotely and defensibly.

Corporate legal departments benefit from access to this technology in four important ways: instant access to information, complete control over their discovery processes, predictable affordability, and total readiness for litigation response now and in the future—giving corporate legal teams the power to "know now" and not be in the dark on status or insights that will help them manage their case strategy.

Zapproved's Z-Discovery Platform is built from the ground up to specifically take full advantage of the efficiencies that cloud infrastructure offers. Z-Discovery runs on the flexible, scalable, pay-as-you-go AWS Cloud, can be deployed instantaneously, and is hyper-fast, with the elasticity to handle matters of any size.
